

Datalogic Industrial Automation is an industry-leader in products and solutions for material handling, traceability, inspection and detection applications.
With the acquisitions of Accu-Sort and PPT Vision in 2012, the company offers a comprehensive portfolio of products, technologies and solutions delivered by a team of skilled professionals dedicated in providing superior service to customers.
Datalogic is the partner of choice for organizations in the Industrial Automation market.

## Factory Automation

- AUTOMOTIVE
- ELECTRONICS
- FOOD \& BEVERAGE
- GENERAL MANUFACTURING
- HEALTHCARE - PHARMACEUTICAL

## Transportation \& Logistics

- AIRPORTS
- COURIER, EXPRESS PARCEL (CEP)
- POSTAL
- RETAIL DISTRIBUTION

## Product portfolio

Datalogic Industrial Automation has the most comprehensive offering of products and solutions for traceability, inspection and detection applications in factory automation and logistics processes: industrial LASER scanners, cameras and vision systems, sensors, machine safety devices and LASER markers.

## Identification

Even the most demanding and efficient automation of identification processes can leverage Datalogic Industrial Automation's leadership in the market. We manufacture the world's most comprehensive family of fixed-mount line and omnidirectional scanners.
We also offer the latest CCD vision technology with the world's largest installed base of CCD systems for bar code reading and dimensioning.
All of our AUTO-ID products and solutions leverage the broadest decoding library that has been developed through the years. Datalogic's comprehensive AUTO-ID portfolio is used in a wide range of applications and machines which are behind many of the everyday processes that keeps the global economy running.

## Sensors \& Safety

Datalogic Industrial Automation offers a best-in-class, comprehensive product portfolio of photoelectric and proximity sensors, rotary encoders, temperature controllers and measurement devices, as well as type 2 and type 4 safety light curtains.
These product lines provide solutions for applications involving color, contrast and luminescence, label detection, dimensional and distance measurement, in addition to machine safeguarding and access control in dangerous areas.

## Machine Vision

The Datalogic Industrial Automation machine vision product line encompasses both hardware and software while covering a wide range of performance and price point requirements. The vision portfolio of products and solutions ranges from simple vision sensors to smart cameras and embedded vision systems.

## Laser Marking

Laser Marking sources and systems provide value driven marking solutions for automotive, metal tools, medical, electronics and packaging. Datalogic Industrial Automation offers an extensive range of state-of-the-art technology, excellent performance and high reliability marking equipment.

## Inductive Sensors

Inductive proximity sensors generate a magnetic field from their detection faces. Whenever a detectable object moves into the sensor's field of detection, Eddy currents build up in the target and dampen the sensor's magnetic field. This effect triggers the sensor's output. Since a current in the target is needed for detection, inductive proximity sensors are uniquely suited for detection of all types of metals.

## ADVANTAGES

-Not affected by humidity and dust
-No moving parts, no mechanical wear
-Independent of the color of the object to detect
-No dead zone

## DISADVANTAGES

-only detect metallic objects
-low operating distance
-sensitive to electromagnetic interference
(such as electric welding, induction ovens)

## Shielded models - FLUSH mounting

Shielded models can be installed with their sensing faces flush to the metal. The distance from opposing metal surfaces must be $\geq 3$ sn and the distance between two proximity switches (side-byside) $\geq 2 \mathrm{D}$.

## Unshielded models - NON-FLUSH mounting

Unshielded models can be identified by their 'caps", since they have no metal housing surrounding the area of the sensing face. The sensing face must extend $\geq 2$ sn from the metallic installation medium. The distance from opposing metal surfaces must be $\geq 3$ sn and the distance between two adjacent proximity switches $\geq 3$. The metal body leaves uncovered part of the sensing area resulting in an increased sensing distance.

Main tubular models are available in both nickel plated brass and stainless steel housing, with the active sensing face in LCP plastic.

## METAL FACE version:

Are available stainless steel versions (M12,M18).
Are used in especially harsh environments and applications which are too extreme for standard sensors. They resist to abrasive media, aggressive cleaners and solvents with their rugged sensing face. IP67 protection.

## WELD FIELD IMMUNE version:

These special field immune models are ideal for welding environments and other applications where large magnetic fields are present. They are rated for reliable operation near the current line carrying 20,000 amps.

## NAMUR version:

Are available 2 wires versions (M5, M6,5, M8, M12, M18, M30). They can be used in conjunction with suitable switching amplifiers, in explosive systems or Zone 1 and Zone 2 areas.
The switch amplifier must be installed outside the explosive area. Almost all versions have IP67 mechanical protection.

Nominal Switching distance (Sn) According to EN 60947-5-2 When an inductive proximity sensor is rated for sensing distance, it refers to the sensor's ability to detect the 'standard detectable object" at its specified sensing distance. The 'standard detectable object" is a 1 mm thick square piece of ferrous iron that is in height and width the size of the proximity sensor's detection face's diameter.

When the object to be detected is a different metal material, multiply the value of the rated operating distance for a reduction factor. The table beside shows the average reduction factors of materials according to the standards.

| REDUCTION FACTOR |  |
| :--- | :--- |
| Fe37 | $1 \times \mathrm{Sn}^{*}$ |
| Stainless Steel AISI316L <br> (X2CrNiMo17-12-2, UNI EN 10088-3) | $0,9 \times \mathrm{Sn}$ |
| Brass-Bronze <br> (CuZn33, UNI EN 12163:1999) | $0,5 \times \mathrm{Sn}$ |
| Aluminum (25C) <br> (EN AW-1060, UNI EN 573-3:2006) | $0,4 \times \mathrm{Sn}$ |
| Copper <br> (Cu-DHP, UNI EN 1652:1999) | $0,3 \times \mathrm{Sn}$ |

## Hysteresis (H):

distance between the point of switching on and the point of switching off of the trigger object. The value is a percentage of the nominal switching distance Sn.

## AC/DC version:

Are available 2/3-wires versions ( $\mathrm{M} 12, \mathrm{M} 18, \mathrm{M} 30$ ) , that operate in alternating current with voltage drop of 5 V for currents of the order of 100 mA .
To be able to provide a proper potential drop at the load, it is recommended to power the sensors with at least a supply voltage equal to the Voltage drop indicated (5V).

M12/18/30 FLUSH models are ATEX certified

IP69K
The Stainless Steel series is rated IP69K.

OPERATING DISTANCE

| MODEL | M4 | M5 | M6,5 | M8 | M12 | M18 | M30 | SQUARE |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| DIAMETER (mm) | 4 | 5 | 6,5 | 8 | 12 | 18 | 30 | $8 \times 8 ; 40 \times 40$ |
| OPERATING DISTANCE $(\mathrm{mm})$ | 0,8 | $0,8 \ldots 1,5$ | $1 \ldots 3$ | $1,5 . . .3$ | $2 \ldots 8$ | $5 \ldots 14$ | $10 \ldots 20$ | $1,5 \ldots . .30$ |

## HOUSING LENGTHS

The following table shows the approximate length (mm) intervals for all categories and models of tubular inductive sensors.

| MODELS | STANDARD |  | SHORT |  |
| :---: | :---: | :---: | :---: | :---: |
|  | connector | cable | connector | cable |
| M4 | --- | 25 | --- | --- |
| M5 | 40 | 20... 25 | --- | --- |
| M6,5 | 53... 63 | 46... 55 | 50... 54 | 40... 44 |
| M8 | 52... 73 | 44... 55 | 48... 57 | 40... 44 |

| M18 | 73... 82 | 70... 78 | 56... 65 | 47... 56 |
| M30 | 74... 85 | 70... 82 | 56... 68 | 49... 56 |

WIRES

| TYPE | description |
| :--- | :--- |
| 2-3 WIRES | Work with sinking or sourcing devices |
|  | Vdc, Vac and NAMUR versions |
| H WIRES | Higher leakage current |
|  | Must select PNP or NPN, NC or NO version |
|  | 10-30 Vdc version |
|  | Low leakage current |
|  | Programmable output |

The number of inductive proximity sensors that can be connected in series or parallel is limited.

Parallel connection: the leakage current of each single sensor, when added to the other, may accumulate and drive the load even in the absence of operated switches.

This problem is more relevant in versions AC 2-wire, because of the high voltages and currents supplied to the sensor. For this type of connection you should use a 3 -wire sensors working in DC.

## ELECTRICAL PARAMETERS

- NOMINAL VOLTAGE

Is the permissible voltage range in which certain safe operation of the switch is guaranteed.

- RESIDUAL RIPPLE

Is the maximum admissible ripple of the DC supply voltage shown as percentage to its medium value.

- MAX. OUTPUT CURRENT

It shows maximum output current a sensor can cope with when working steadly.

- MIN. OUTPUT CURRENT

Is the smallest load current required for function of the switch when ON.

## - RESIDUAL CURRENT

Is the current flowing through the load when a proximity switch is not conducting (open).

## - VOLTAGE DROP

Is the voltage measured across the load of a closed (conducting) sensor at load current.

## - START UP DELAY

Is the time from when the supply voltage is applied, and the proximity switch assumes the ready state. This time may not be longer than 300 ms . During this time there must be no fault signal longer than 2 ms .

- SWITCHING FREQUENCY

Refers to the maximum number of switching operations per second.

- SHORT CIRCUIT PROTECTION Is 100 A, i. e., per EN 60947-5-2 the power supply during testing in short circuit mode must be able to provide at least 100 A for a short duration. This current is prescribed in the standard in order to test.
- PROTECTION AGAINST INVERSION OF POLARITY
Available in DC supplied type, it prevents the sensor from being damage when supply cables are incorrectly connected.
- INDUCTIVE LOAD PROTECTION

It protects sensor output in presence of high inductive loads. This protection is performed by a diode or zenner diode.

- Nickel-plated Brass housing
- Standard length
- Short length
- Normal and Double range Operating distance
- Operating distance: 1,5 ... 20 mm
- M6,5, M8, M12, M18, M30
- cable, M8 or M12 connector
- 2,3 or 4 wires
- PNP, NPN, PNP/NPN, NO, NC, NO/NC
- IP67 protection
- Stainless Steel housing
- Standard length
- Short length
- Normal and Double range Operating distance
- Operating distance 0.8 ... 20 mm
- M4, M5, M6,5, M8, M12, M18, M30
- cable, M8 or M12 connector
- 3 wires
- PNP, NPN, NO, NC
- IP69K protection

INDUCTIVE AC

Nickel-plated Brass housing

- Standard length
- Operating distance 2 ... 10 mm
- M12, M18, M30
- cable or M12 connector
- $20+250 \mathrm{Vac}(50,60 \mathrm{~Hz})$
- 2 or 3 wires
- NO
- IP67 protection
- Nickel-plated Brass housing
- Short length
- Operating distance 0.8 ... 15 mm
- M12, M18
- cable, M8 or M12 connector
- 2 wires
- PNP, NO
- IP67 protection

- flush
- Stainless Steel
- op.dist.: $0,8 \mathrm{~mm}$
- diameter: 4 mm
- 3 wires
- PNP or NPN, N.O.
- cable

## M5

- flush
- Stainless Steel
- op.dist.: $0,8 \mathrm{~mm}$
- double range vers.: $1,5 \mathrm{~mm}$
- diameter: 5 mm
- 3 wires
- NAMUR vers.
- PNP or NPN, N.O. N.C.
- M8 connector or cable

## M6,5

- flush, non-flush
- Stainless Steel, Nickel plated-Brass
- op.dist.: 1,5... 2 mm
- double range vers.: 2 ... 3 mm
- diameter: 6,5 mm
- standard or short housing
- 3 wires
- NAMUR (2wires) vers.
- PNP or NPN, N.O., N.C.
- M8 connector or cable

## M8

- flush, non-flush
- Stainless Steel, Nickel plated-Brass
- op.dist.: 1,5... 2 mm
- double range vers.: 2... 3 mm
- diameter: 8 mm
- standard or short housing
- 3 wires
- NAMUR (2wires) vers.
- PNP or NPN, N.O., N.C.
- M8, M12 connector or cable

## M12

- flush, non-flush
- Stainless Steel, Nickel plated-Brass
- op.dist.: 2 ... 4 mm
- double range vers.: 4 ... 8 mm
- diameter: 12 mm
- standard or short housing
- 2, 3, 4 (programmable NPN/PNP output) wires
- Vac/Vdc vers.
- Metal Face vers.
- NAMUR vers.
- Field Immune vers.
- PNP or NPN, N.O., N.C.
- M12 connector or cable
- Stainless Steel housing
- Stainless Steel active face
- Standard length
- 2 ... 8 mm
- M12, M18
- M12 connector
- 3 wires
- PNP, NO
- IP67 protection
- Stainless Steel housing
- PTFE active face
- Standard length
- Operating distance 2 ... 8 mm
- M12, M18
- M12 connector
- 3 wires
- PNP, NO
- IP67 protection
- PBT (resin) or Nickel-plated Brass housing
- Operating distance 1.5 ... 15 mm
- $40 \times 40 \mathrm{~mm}$ or $8 \times 8 \mathrm{~mm}$ dimension
- cable, M8 connector or Terminal Block
- 2 or 3 wires
- PNP, PNP/NPN, NO, NC, NO/NC
- IP67
- Nickel plated brass
- M18, M30
- Basic line NO-NC
- Capacitive A.C. (plastic housing)
- Multivoltage (SPDT relay)
- Operating distance: 5 ... 25 mm
- Cable or M8 connector
- 2,4,6 wires
- PNP or NPN, N.O. and N.C. outputs, SPDT relay
- Delay ON or delay OFF model
- IP67 protection

## M18

- flush, non-flush
- Stainless Steel, Nickel plated-Brass
- op.dist.: 5 ... 8 mm
- double range vers.: $8 . . .14 \mathrm{~mm}$
- diameter: 18 mm
- standard or short housing
- 2,34 (programmable NPN/PNP output) wires
- Vac/Vdc vers.
- Metal Face vers.
- Field Immune vers.
- NAMUR vers.
- PNP or NPN, N.O., N.C.
- M12 connector or cable
- Capacitive D.C., N.O.-N.C. outputs
- Capacitive A.C., 2 wires, N.O.

## M30

- flush, non-flush
- Stainless Steel, Nickel plated-Brass
- op.dist.: 10 ... 15 mm
- double range vers.: $15 \ldots . .20 \mathrm{~mm}$
- diameter: 30 mm
- standard or short housing
- 2, 3,4 (programmable NPN/PNP output) wires
- Vac/Vdc vers.
- NAMUR vers.
- PNP or NPN, N.O., N.C.
- M12 connector or cable
- Capacitive D.C., N.O.-N.C. outputs - Capacitive A.C., 2 wires, N.O.
- Capacitive Multivoltage with timer relay output

## SQUARE 40X40

- flush, non-flush
- standard or short housing
- Plastic (PBT resin)
- op.dist.: 15... $30 \mathrm{~mm} ; 7-20 \mathrm{~mm}$
(Analog vers.)
- diameter: 40 mm
- 2,3 wires
- Vac/Vdc vers.
- Analog output 4-20mA vers.
- PNP or NPN, N.O., N.C.
- Terminal block

## SQUARE 8X8

- flush
- Nickel-Plated Brass
- op.dist.: $1,5 \mathrm{~mm}$
- diameter: 8 mm
- 3 wires, PNP, N.O.
- M8 connector or cable

## SOUJARE $40 \times 40$

|  |  |
| :---: | :---: |

## CAPACITIVE

Capacitive sensors are noncontact proximity devices suitable for detecting metals, nonmetals, solids, and liquids. The oscillating circuit is influenced by variations in capacity. When any material comes close to the active face, the capacity of the sensor varies and, if the threshold distance is passed, the sensor switches the state of its outputs. Like for the inductive sensors, the operating distance is calculated using a square piece of Fe37, with 1 mm thickness. The variation of the capacitance is due to the conductivity or non-conductivity of the different materials. Conductive materials change the capacitance of the sensor, while non-conductive materials change the dielectric constant of the reference capacitor; the sensor feel the variation of the generated electric field by its active sensing face.
Datalogic offers a basic range for the Capacitive sensors, M18 and M30 tubular housing, in Direct or Alternated Current, in nickel-plated brass or plastic housing, with timer and sensitivity adjustment trimmer, equipped with the industrial standard outputs, suitable for the most common applications of detection and in the filling level control of the materials.

## Nickel plated brass

## M18, M30

Basic series (NO-NC)
Capacitive A.C. series (plastic housing)
Multi-voltage series (SPDT relay)
Operating distance: $5 . . .25 \mathrm{~mm}$

## Cable or M8 connector

2,4,6 wires
PNP or NPN, N.O. and N.C. outputs, SPDT relay
Delay ON or delay OFF model

## IP67 protection

| MATERIALS | REDUCTION FACIOR |

## Sensitivity adjustment

The sensitivity adjustment must be done when the sensor is installed in a definite and steady position. The regulation must be done in a position half way between minimum and maximum, because, being air dielectric, a strong humidity variation could cause, if the regulation is very light, nuisance tripping. The sensing distance of the sensor depends on the materials to detect, on its dimension and conductivity. The distance could change according to temperature variations.

## Timer adjustment

The timer trimmer allows to set a delay, on the activation (delay ON) or in the de-activation of the output, depends on the model, after the detection of the object. The output will remain active (or inactive) proportionally to the setting point of the screw, starting from 1 second up to 5 minutes.
