

# Code Reader/OCR

## Tracing products

- Accurate multifunctional readers
- High-speed readers (1000 scans/s) in compact design
- Fast reading of moving objects (up to 500 m/min)

# Code Reader

You can select the optimum products from  
We provide Readers for everything from Bar Codes and 2D Codes  
The lineup also includes Readers that

## Ultra Compact and Fast

### Laser-type Bar Code Reader

#### V500-R2 Series

- High speed: 1,000 scans/s
- Long distance: 270 mm
- World's Smallest

### Multi Code Reader

#### V400-R2 Series

- Fastest reading in the class:  
Reads moving objects at up to 500 m/min \*2
- Long distance: 125 mm
- Ultra compact

▶▶ P4

### Conveyors

- Ultra compact for possible mounting in rail gaps.
- Stable reading of high-speed moving objects.

▶▶ P8

### Semiconductor Manufacturing Equipment

- World's smallest reader handles 300-mm wafer loading ports.

### Cartoners

- Prevention of mixing of different cartons by reading bar codes.

### Labeler

- Reading to check printing conditions.

\*1.According to OMRON investigation in January 2013.

\*2.Performance may depend on the code that is read and the printing conditions.

# and OCR Lineup

OMRON's wide lineup of tracing products.  
 printed on paper or labels to DPM directly printed on workpieces.  
 can read expiration dates and other text.

## High-accuracy and Multifunctional

**Multi Code Reader**  
FQ-CR1 Series

- HDR function to cut out ambient light interference.
- Polarizing filter to cut specular reflections.
- Verification with master data.

▶▶ P 12

**2D Code Reader for DPM**  
FQ-CR2 Series

- Reads direct part marking codes.
- Cuts halation from metallic surfaces.
- High-power LED that is effective for low contrast.

▶▶ P 12

**Optical Character Recognition Sensor**  
FQ2-CH Series

- New OCR algorithm.
- Easy application with no dictionary registration.
- Handles dot characters, stamped characters, and more.

▶▶ P 16

**Smart Camera**  
FQ2-S4 Series

- Code reader, OCR, and inspections.
- Lineup includes Integrated Sensors and C-mounts.
- High resolution of 760,000 or 1,300,000 pixels.

▶▶ P 20

### Case Packers

- Lineup of models with many installation distances from 38 to 970 mm.
- Stable reading of low-contrast codes.

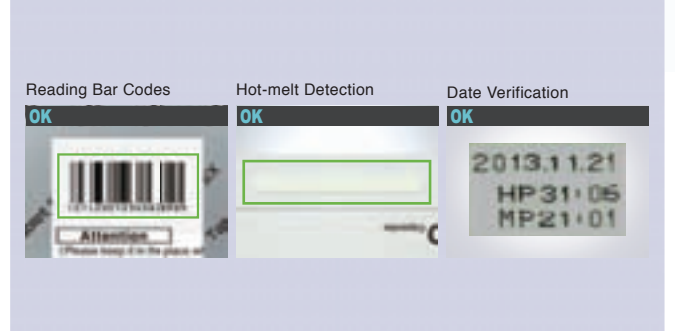

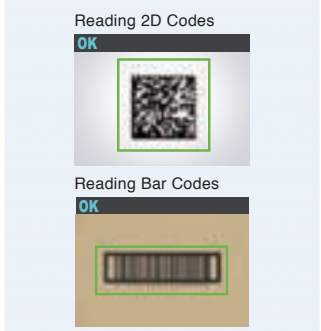

### Automotive Processing Machines

- High-performance filters that cut specular reflections from metallic or glossy surfaces.

### Cartoners

- Multi-processing of everything needed for cartoners: character verification, code reading, and inspections.

# The World's Smallest\* Bar Code Reader That Fits Essentially Anywhere

\*According to OMRON investigation in January 2013.

## Laser-type Bar Code Reader V500-R2 Series

NEW

## High-speed Reading at 1,000 Scans/Second

A high-speed motor and new algorithm gives surprising performance for the size to achieve stable reading even in high-speed takt machines of around 66,000 items/hour.

## Enables Reading Imperfect Codes

Even though it is small, the V500-R2 with its new algorithm is adept at reading even the most imperfect codes. Raster scanning enables reading Bar Codes even if they are partially dirty or missing.

## Resists Ambient Light Interference

Operation is possible with ambient illumination of up to 80,000 lx (sunlight), so the Code Reader can stably read even near Photoelectric Sensors with little influence from ambient light.

Ambient Light Interference Guidelines	
Florescent light	4,000 lx max.
Sunlight	80,000 lx max.

## Long Range Up to 270 mm

The wide reading distance from 60 to 270 mm lets you handle variations in conveying and workpiece height without changing the installation.

## Reading Test Switch Provided

Just press the Scan button on the Reader to perform a read test. The results are provided with the Read OK indicator and buzzer. We achieved an operation that is simple enough for essentially anyone to increase mounting efficiency.

## Minimum Readable Narrow Bar Width: 0.15 mm

Reading is even possible for Bar Codes with narrow bars of 0.15 mm.

## GS1-Databar (RSS) Supported

The data-rich GS1-Databar (RSS code) Bar Codes can also be read.

## Verification with Master Data

You can verify character strings to see if they match preset master data without a special device.

## Ordering Information

Type		Model
Laser-type Bar Code Reader		V500-R2CF
OMRON PLC connecting cable	D-sub 9-pin, 0.8M	V509-W011
	D-sub 9-pin, 5M	V509-W016
PC/AT Connecting cable	D-sub 9-pin, 0.8M	V509-W011D
	D-sub 9-pin, 5M	V509-W016D

## Ratings and Performance

Model		V500-R2CF
Direction of view		Front view
Applicable codes	Bar code	WPC(JAN/EAN/UPC), Codabar(NW-7), ITF, Industrial 2 of 5(STF), Code39, Code93, Code128, GS1-128(EAN-128), GS1-Databar(RSS-14), GS1-Databar Limited(RSS Limited), GS1-Databar Expanded(RSSExpanded)
	Number of reading digits	No upper limit (depends on bar width and reading distance)
Reading performance(*)	Minimum resolution	Bar code: 0.15 mm
	Contrast (PCS)	0.45 or more (white reflectance 70 % or more)
	Reading distance	60 to 270 mm (At narrow bar: 0.5 mm)
	Reading angle	Within 40° (Including margins at left and right sides)
	Pitch angle ( $\alpha$ )	$\pm 30^\circ$
	Skew angle ( $\beta$ )	$\pm 60^\circ$ (However, exclude from 10° upper side to 8° lower side)
	Tilt angle ( $\gamma$ )	$\pm 25^\circ$
	Reading of bar codes on curved surfaces (R)	$R \geq 20\text{mm}$ (UPC 12 digit)
	Light source	Red laser diode (Wave length: 650 nm)
	Light output	1.0m W or less (Correspond to JIS class 2)
	Scan type	Raster scan
Number of scan	1000 scan/sec.	
Interface	Communication specification	RS-232C
	OK/NG outputs	NPN open collector output (cable work required)
Function setting method		Menu sheet reading method or host command method
Functional specifications	Reading trigger	External trigger (Transistor input), Trigger by command (RS-232C), Trigger a test reading by pressing the SCAN button on the product
	OK/NG signals	OK signal is turned on to indicate a successful read NG signal is turned on to indicate a successful read of a non-registered label
	Indication LED	OK LED (green) illuminates to indicate a successful read
	Buzzer	Notifies a successful reading with a buzzer sound (Muting available)
Power supply specification	Power voltage	4.5 to 5.5 VDC
	Consumption current	During operation: 500 mA or less; during standby: 150 mA or less
	Inrush current	2.0 A MAX
Environmental specifications	Ambient temperature range	At operation: 0 to + 45°C At storage: -20 to + 60°C
	Ambient humidity range	At operation and storage: 20 to 85% RH (with no icing or condensation)
	Ambient atmosphere	No corrosive gases
	Ambient light	Fluorescent lamp: 4,000lx or less, Sunlight: 80,000lx or less
	Vibration resistance	10 to 150 Hz, half amplitude 0.35 mm, 3 directions (X/Y/Z), 8 minutes each 10 times
Degree of protection		IP54 (IEC60529)
Weight	Main unit only	Approximately 80 g
	Including accessories	Approximately 190 g (including mounting bracket, insulation plate and screws)
	Packaged weight	Approximately 270 g (including packing carton)
Dimensions	Main unit	Approximately 29(W) × 34.5(D) × 17(H)mm
	Packing carton	Approximately 245(W) × 110(D) × 40(H)mm
Input/output connector		Round DIN connector
Code length		Approximately 1.5 m
Minimum bending radius of cord		Approximately 23 mm
Accessories		Operation manual, menu sheet, mounting bracket, insulation plate, M3 × 6 screw (two), M3 × 8 screws (one), M5 × 10 screws (two)
Material, Color	Upper case	Magnesium diecast, black
	Front panel	PC, black
	Labels	PET
	Reading window	PMMA, transparent
	Cable	Polyvinyl chloride (PVC), black
	Insulation plate	ABS, black
	Mounting bracket	SUS304, silver

\* Unless otherwise specified, use a JAN x1, MRD 63% or higher (PCS = 0.9 or higher) bar code with a pitch angle  $\alpha = 0^\circ$ , a skew angle  $\beta = 15^\circ$ , a tilt angle  $\gamma = 0^\circ$ , and a curvature  $R = \infty$ .

## Reading range performance (typical example)

Explained with examples of following conditions:

- Contrast: MRD 63 % (PCS = 0.9)
- Bar code: CODE39
- Installation condition:  
Pitch angle  $\alpha = 0^\circ$ , skew angle  $\beta = 15^\circ$   
Tilt angle  $\gamma = 0^\circ$ , curvature  $R = \infty$

## Dimensions

(Unit: mm)

### Bar Code Reader V500-R2CF

### Safety Precautions for Laser Equipment

**WARNING**

Avoid eye exposure to direct or scattered radiation reflected by a mirror surface.  
Laser beam emitted from a laser has high power density and may become blind when the beam is directed into eyes.

### Laser Label Indications

This warning label is attached to the Bar Code Reader.  
Never remove this label or place objects in front of it.

# The Ultra-small Multi-code Reader That Can Handle Speed

Multi Code Reader  
V400-R2 Series

NEW

Improves Machine Takt Time with the  
Fastest Reading in the Class:  
Reads Moving Objects at Up to 500 m/min\*

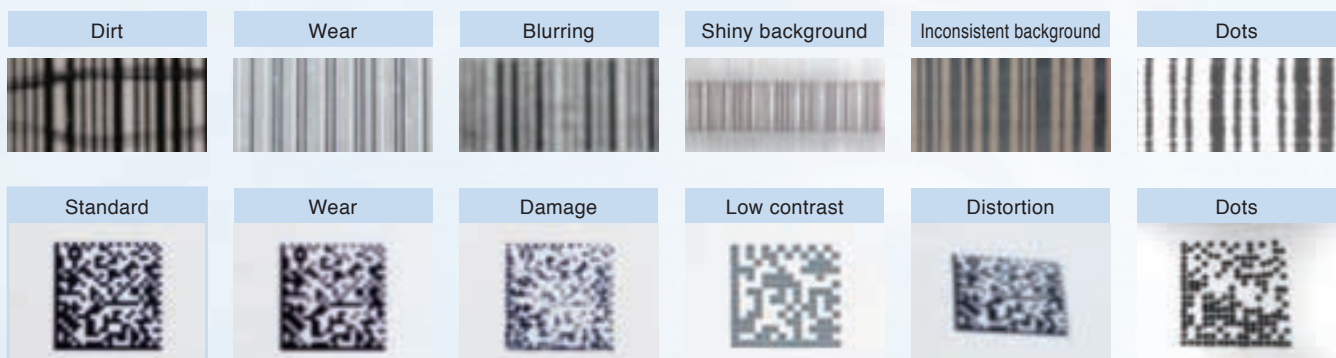

It is not just the size that makes this Reader easy to build into equipment. It enables stable reading of moving objects on high-speed lines. Build it into equipment to read moving objects, which is achieved with a new algorithm.

\* Performance may depend on the code that is read and the printing conditions.

## Stable Reading of Imperfect Codes

The V400-R2 with its new algorithm is adept even the most imperfect codes. Even for codes that were previously difficult to read, you can change the exposure time and gain to achieve the optimum settings to enable reading.

## Distance Variations

There are two models in the lineup to let you select the field of view or installation distance that is best for the equipment type. Both models are the same size, so additional design work is not necessary to change the model.

## Reading Test Switch Provided

We achieved an operation that is simple enough for essentially anyone. Just press the Scan button on the Reader to perform a read test. The results are provided with the Read OK indicator and buzzer.

## Aiming Positioning Function

A guide light lets you easily find the ideal installation position. You can easily and quickly position the codes with the aiming function.

## Body Resists Environments to IP65

IP65 protection is provided because that is generally the level that is required to build devices into equipment. That enables reliable application in harsh environments subject to water and mist.

## GS1-Databar (RSS) Supported

The data-rich GS1-Databar (RSS code) Bar Codes can also be read. This enables reliable applications in the pharmaceutical industry, where GS1-Databar (RSS code) Bar Codes are becoming popular.

## Verification with Master Data

You can verify character strings to see if they match preset master data without a special device.

## 2D Code Reader for Direct Part Marking codes FQ-CR2 Series

FQ-CR1

FQ-CR2

### High-power LEDs

The wider the field of view, the more difficult it is to maintain consistent lighting within the field, causing errors in reading. The built-in LEDs of the FQ-CR Series use a unique OMRON DR optical system for effective light usage to maintain consistent lighting within the field of view at a brightness that is four times that of previous models.

Previous Lighting

High-power Lighting

### HDR Function to Cut Out Ambient Light Interference

The HDR (high dynamic range) function minimizes the influence of changes in lighting conditions and light reflection. This enables stable inspections even for materials that are difficult to light evenly, such as metal parts or glossy films, or in locations subject to external light interference.

Halation

Stable Detection for  
Metal Surfaces Subject to  
Gloss and Inconsistent  
Lighting

### Polarizing Filter to Cut Specular Reflections

A polarizing filter is included to cut specular reflection from glossy surfaces. This enables stable code reading even for metallic or other glossy surfaces.

Without Polarizing Filter

With Polarizing Filter

### Connection of Up to 32 Readers

Up to 32 Code Readers can be controlled from the Touch Finder setup console. Expansion of required processes is simple.

Connect up to 32 readers

FQ-CR2

## Removing Printing Irregularities or Noise

You can apply up to three of the four unique filters developed by OMRON in the desired order to remove printing irregularities and noise, in order to achieve a stable reading.

### Combining Filtering

Erosion and dilation can be combined to connect dots without changing the dot thickness.

### Types of Filtering

Smooth	Smooths the image.	Erosion	For white codes, reduces the cell size. Effective for reading separated dot codes.
Dilate	For white codes, increases the cell size. Effective for reading codes with cell spreading.	Median	Removes noise.

## Retry Reading Until Successful

Code Readers must be able to read codes even for poor printing conditions. You can automatically retry reading while changing the exposure time and other reading conditions, even for changing workpieces or environments, to enable a stable reading.

The following retry functions are provided.

- 1 Retrying the Specified Number of Times with the Same Conditions**  
 Reading is performed the specified number of times for the same scene.
- 2 Retrying While External Trigger Is Input**  
 Reading is performed until successful, as long as an external level trigger is input.
- 3 Retrying While Changing the Shutter Speed**  
 Reading is performed for the same scene while changing the exposure time in stages.
- 4 Retrying While Changing the Reading Conditions**  
 When reading DPM codes, inconsistencies in printing conditions can result in NGs if reading is performed with only one set of reading settings. The FQ-CR allows you to register up to 32 sets of reading conditions as scenes and retry reading while changing the scenes in order. The system automatically determines the scenes with the highest usage rates and changes the order to start with them to flexibly handle changes in reading conditions. Of course you can specify a fixed order if required.

Register 32 sets of reading conditions.  
Rapidly switch to the optimum reading conditions.

FQ-CR1

## Verification with Master Data

You can verify character strings to see if they match preset master data without a special device.

# An OCR Sensor with Built-in Dictionary for Reading Expiration Dates and Lot Numbers

Optical Character Recognition Sensor  
FQ-CH Series

## Approx. 80 Built-in Fonts

The large amount of data in the built-in dictionary contains approximately 80 different fonts that are used on FA sites. Variations for worn characters, blurring, distortion, different backgrounds, and size changes have been included to enable stable and highly accurate reading with the built-in dictionary even for some variations in the characters. It is not necessary to set parameters to compensate for character contrast or positional offsetting.

# Utilities That Make Everyday Operation Easier

## Verification to Reduce Setup Work

You can verify the read character data against the character data registered in the master data. Master data registration is easy. A character string is read and the result is registered in the master data. This reduces setting time and mistakes in setting character strings. You can register up to 32 character strings in the master data and easily change the current master data with an external signal.

0.Master data 0	SL1028	^
1.Master data 1	201211	
2.Master data 2	28L	
3.Master data 3	WP31:06	
4.Master data 4	???:??	
5.Master data 5	HP/2013	v

## Registration in Model Dictionary

You can add characters to the dictionary. You can achieve reliable operation when reading special fonts even if reading was not stable with the default settings.

Registered

## Logging Images and Reading Data

The read images and reading results can be temporarily saved in the sensor, and up to 10,000 images and 10,000,000 reading results can be saved in a 4-GB SD card. You can select logging both OK and NG results or only NG results to aid in traceability.

Sensor

Images: 20  
Reading results: 1,000 max.

Touch Finder

Images: Approx. 10,000  
Reading results: Approx. 10,000,000 (with 4-GB SD card)

## New OCR Algorithm: Matching with Structural Models

Even in cases like the following one, where character registration is required for image matching methods, no character registration is required to read the characters with this new method, which matches structural models of characteristic points.

Structural models record the characteristics of each character in approximately 80 fonts.

The position and structure of characteristic points are used to recognize characters.

Background Changes

Size and Font Changes

## Reads both Codes and Characters in One View with 1.3 Megapixels

It is generally said that a resolution of 700,000 pixels or higher is required to read both codes and characters in one field of view. The FQ2-S4 Series includes 760,000-pixel models with built-in lighting as well as 1,300,000-pixel models with C-mounts for a flexible selection of fields of view so you can stably read information-heavy codes with one read image.

## Code and Character Verification

OCR and Code Reading inspection items can be combined to read codes and verify them against character strings all within the FQ2. No programming of external devices is required.

① Reads the Bar Code.  
② Reads the character string and verifies it against the Bar Code

## Character Verification and Label Position Inspection

Although previously performed as separate processes, character verification and inspections can now both be performed with one FQ2 Sensor. This helps you reduce costs and save space.

## Code Reading and Component Positioning

The Sensor can measure angles of rotation and other position information, so it can also be used for positioning. Inspections can also be performed for the number and size of holes along with the position information.
