

CERTUS Configurable Safety Module

CARLO GAVAZZI

- Reduces the number of components (less footprint and wiring)
- Faster electrical cabinet construction
- Flexible, intuitive and quick logical configuration software
- Easy to set up tamper-proof safety systems
- Simplifies machine maintenance through the Configuration Memory Card, which can be used to transfer the configuration program to a new CERTUS in just a few simple steps
- Ideal for machine designers
- Certified to the highest safety levels: SIL +, SILCL 3, PLe, Cat.4
- Up to 128 inputs and 16 OSSD pairs
- Up to 14 expansion units in addition to the CMM Master, excluding relay modules
- Compact design: single module dimensions (W x H x D) 108 x 22.5 x 114.5

Product Description

CERTUS is the new Carlo Gavazzi modular configurable safety system. This new safety device is capable of monitoring several safety photocells, emergency stops, safety mats, magnetic or mechanical switches, twohand controls etc.

Thanks to the new CERTUS modular structure, it is possible to adapt its I/O configuration and functionality to the demands of many different applications; making CERTUS a highly versatile and flexible safety system.

Main Unit and Expansion Units Features

- **CMM stand alone main unit:**
 - 8 safety inputs, 2 OSSD pairs - 400mA output current - with separate EDM and Start/Restart, 4 test outputs and 2 programmable status outputs
 - Configurable via PC through USB interface
 - CMC (CERTUS Configuration Memory Card) slot for program storage (optional feature)
- **C 8I 20 expansion unit:**
 - 8 safety inputs, 2 OSSD pairs - 400mA output current - with separate EDM and Start/Restart, 4 test outputs and 2 programmable status outputs (same as CMM but no CPU).
- **C 8I and C 16I expansion units:**
 - 8 and 16 safety inputs, 4 test outputs.
- **C 12I 8TO expansion unit:**
 - 2 safety inputs, 8 test outputs - can control up to 4-wire safety mats.
- **C 2OSSD and C 4OSSD expansion units:**
 - 2 and 4 OSSD pairs - 400mA output current - with separate EDM and Start/Restart, 2/4 programmable status outputs.
- **C 2R and C 4R relay expansion units:**
 - 2 safety relays - 2 NO + 1 NC connectable to 1 OSSD pair.
- 4 safety relays - 4 NO + 2 NC connectable to 2 independent OSSD pairs.
- 2/4 safety relays with 6A 250VAC guided contacts.
- 1/2 NC contacts for External Device Monitoring (EDM).
- **C DDC Data and Diagnostic Communication expansion units for connection to the most common industrial Fieldbus system:**
 - C PDP - Profibus DP
 - C DNET - DeviceNet
 - C CAN - CANopen
 - C EIP - Ethernet IP
 - C ECAT - EtherCAT
 - C PFNET - PROFINET
 - C OMMS - Universal Serial Bus
- **CBT Bus transfer expansion unit, up to 50m length per connection. Maximum of 6 connections per system**
- **Speed Monitoring expansion units to monitor (PLe):**
 - Zero speed
 - Max speed
 - Speed range
 - C EIP - Ethernet IP
 - Motion direction; rotation / translation.

Characteristic of the Output Circuit

Excitation voltage	17...31 VDC	Maximum switchable voltage (AC)	400VAC
Minimum switchable voltage	10VDC	Maximum switchable current	6A
Minimum switchable current	20 mA	Response time	12ms
Maximum switchable voltage (DC)	250VDC	Mechanical life of contacts	> 20 x 10 ⁶

CERTUS C 8I 20

- I/O expansion unit
- 8 digital inputs
- 2 OSSD pairs with 400mA output current
- 4 test outputs for sensor monitoring
- 2 programmable digital signal outputs
- 2 inputs for Start/Restart interlock and external device monitoring (EDM)
- 24 terminal points in 22.5 mm
- Connectable to CMM via SCC proprietary bus

CERTUS Bus Transfer (CBT)

CERTUS CBT is an expansion module which allows the connection of the CMM with other expansion unit modules placed at great distances. Up to 50m per connection. Maximum 6 connections/system.

Through the use of a shielded cable (compatible with RS485 standard) two CBT modules placed at the desired distance can be linked together.

Each CBT2 has two independent connection channel; the connection of two CBT2 can be performed by wiring a channel of your choice.

CBT1 has only one channel and must be connected as the first or last module.

15	CH 1 - C	CH 1 - C	
16	CH 1 - D	CH 1 - D	

The CERTUS system units are provided with terminal blocks for the electrical connections. Each unit can have 16 or 24 terminals. Each unit also has a rear panel plug-in connector (for communication with the master and with the other expansion units). The C 2R and C 4R are connected via terminal blocks only.

CERTUS Safety Speed Monitoring (C PSS, C ES1 and C ES2)

Speed Monitoring expansion units to monitor (PLe):

- Zero speed
- Max speed
- Speed range
- Motion direction; rotation / translation
- Allow the configuration of up to 4 speed thresholds for each logic output (axis). Each unit integrates 2 configurable logic outputs being capable to control up to 2 independent axes. RJ45 for encoder connections (1 of CES1, CES2 of 2) and terminal blocks for connection of proximity (up to 2 proximity switches per module).
- Inputs frequency: Encoder up to 500 KHz (300 KHz for HTL); Proximity up to 5 KHz.

Configuration Memory Card (CMC)

CMC is a memory card supplied as an accessory to save the CERTUS configuration data for transfer to a new CMM without using a computer.

- Each time CMC is used, carefully check that the chosen configuration is the one that was planned for that particular system.
- If the file inside the CMC does not match the one contained in the CMM, the CMC will overwrite the CMM erasing definitely the old data. **WARNING: ALL DATA PREVIOUSLY CONTAINED IN THE CMM (PASSWORD INCLUDED) WILL BE OVERWRITTEN.**
- Perform again a fully functional test of the system composed of CERTUS plus all devices connected to it.

Technical Data

Connections	8 poles connector	Relative humidity	10% to 95%
Operating temperature	-10° to 55°C	Dimensions (H x W x D)	21.5 x 2 x 18mm

CERTUS USB Connection Cable (C USB)

C USB is an interconnection cable necessary to connect CERTUS CMM to the PC with the CCS (CERTUS configuration software) installed.

- Connect the C USB cable only with CCS software installed: the driver necessary to the identification of CMM is contained in the software.
- The cable has two connectors:
 - 1) type "A" USB connector for the connection to the computer
 - 2) type "B" mini-USB connector for the connection to the CMM module.
- The length of the C USB is 1.8m=> DO NOT USE OTHER CABLES OR LONGER THAN 3m.
The configuration software automatically recognises a connected CMM module and reports it on the status bar.

Technical Data

Nominal current (max)	100mA
Nominal voltage	5VDC
Connections	1 connector type "A" 1 connector type "B"
Length	1.8m

CERTUS Configuration Software (CCS)

The CERTUS Configuration Software (CCS) is a userfriendly configuration tool to program the CMM in just a few simple steps. By clicking on the functional icons it is easy to “Drag&Drop” configurable safety functions.

The accurate functional test incorporated in the CCS, immediately detects potential configuration errors. This also guarantees that configuration errors do not lead to an unsafe situation and valuable time is not lost during machine commissioning.

In addition, the multi-level password management of CCS gives further security against non-authorized access to the configuration software. Through the MONITOR I/O feature is possible to perform a real time monitoring of the I/Os status and diagnostic of a working CERTUS system.

CERTUS Safety Communication Connector (SCC)

The SCC is a 5 poles connector that permits the interconnection between the CERTUS modules.

1. Connect the same number of “SCC” 5-pole rear panel connectors as the number of units to be installed (except for the relays modules that do not need this connector).

2. Fix the train of connectors to the DIN rail: (hooking them at the top first).
THE FEMALE CONNECTOR MUST BE ON THE LEFT (FRONT VIEW).

3. Fasten the units to the rail, arranging the contacts on the base of the unit on the respective connector.
4. Press the unit gently until it snaps into place.
