3 ELECTRICAL SPECIFICATION

3.1 ABSOLUTE MAXIMUM RATINGS

VSS = 0 V, Ta = 25 °C

Item	Symbol	Min	Max	Unit	Note
Supply Voltage for logic	V_{DD}	-0.3	6.0	V	
Supply Voltage for I/O Pins	V_{DDIO}	-0.3	6.0	V	Note 1, 2
Supply voltage for Display	Vcc	0	15	V	
Operating Temperature	Тор	-40	85	°C	Note 3
Storage Temperature	Tst	-40	90	°C	Note 3

Note 1: All the above voltages are on the basis of "VSS=0V".

Note 2: When this module is used beyond the above absolute maximum ratings, permanent damage to the module may occur. Also for normal operations it's desirable to use this module under the conditions according to Section 3.2 "Electrical Characteristics". If this module is used beyond these conditions the module may malfunction and the reliability could deteriorate.

Note 3: The defined temperature ranges do not include the polarizer. The maximum withstood temperature of the polarizer should be 80°C.

3.2 ELECTRICAL CHARACTERISTICS

Characteristics	Symbol	Conditions	Min	Тур	Max	Unit
Summly Waltage for Logic	17	5V I/O Application	-	-	-	V
Supply Voltage for Logic	$V_{ m DD}$	Low Voltage I/O Application	2.4	2.8	V_{DDIO}	V
Supply Voltage for I/O	$V_{ m DDIO}$	5V I/O Application	4.4	5.0	5.5	V
Supply Voltage for 1/O	▼ DDIO	Low Voltage I/O Application	2.4	2.8	3.6	V
Supply Voltage for Display	V_{CC}	Note 1	8.5	9	9.5	V
High Level Input	V_{IH}	I _{OUT} =0.1mA,	$0.8 \mathrm{xV}_{\mathrm{DDIO}}$	-	V_{DDIO}	V
Low Level Input	V _{IL}	3.3MHz	0	-	0.2 x V _{DDIO}	V
High Level Output	V_{OH}	I _{OUT} =0.1mA,	0.9 x V _{DDIO}	-	V_{DDIO}	V
Low Level Output	V _{OL}	3.3MHz	0	-	0.1 x V _{DDIO}	V
Operating current for VDD	Idd	-	-	180	300	μΑ
		Note 2	-	7.1	8.9	
Operating current for Vcc	Icc	Note 3	-	10.5	13.1	mA
		Note 4	-	19.9	24.9	
Sleep mode current for VDD	Idd sleep		-	1	10	μΑ
Sleep mode current for Vcc	ICC SLEEP	1. C D' 1 ()	-	2	10	μA

Note 1: Brightness (Lbr) and Supply Voltage for Display (VCC), are subject to the change of the panel characteristics

Note 2: $V_{DDIO} = 2.8V$ or 5.0V, $V_{CC} = 9.0V$, 30% display area turned on.

Note 2: $V_{DDIO} = 2.8V$ or 5.0V, $V_{CC} = 9.0V$, 50% display area turned on.

Note 4: $V_{DDIO} = 2.8V$ or 5.0V, $V_{CC} = 9.0V$, 100% display area turned on.

3.3 INTERFACE PIN ASSIGNMENT

No.	Symbol	I/O	Function		
1	N.C.(GND)	-	Reserved Pin (Supporting Pin) The supporting pin can reduce the influence from stress on the function pins. This pin must be connected to external ground		
2	VSL	P	Segment Voltage Reference Pin When external VSL is not used, this pin should be left open. When external VSL is used, connect with resistor and diode to ground.		
3	VSS	P	Ground of Logic Circuit This is a ground pin. It also acts as a reference for the logic pins, the OEL driving voltages and the analogue circuits. It must be connected to external ground.		
4	REGVDD	I	Internal VDD Regulator Selection Pin When this pin is pulled HIGH, internal VDD regulator is enabled (VDD outputs 3.3V). When this pin is pulled LOW, internal VDD regulator is disabled (VDD outputs 5V).		
5	SHLC	I	COM Scan Direction Selection This pin is used to determine the Common output scanning direction SHLC COM scan direction COM0 to COM31 COM31 to COM0		
6	SHLS	I	SEG Direction Selection This pin is used to determine the SEG direction SHLS SEG direction 0 SEG99 to SEG0 1 SEG0 to SEG99		
7	VDD	Р	Power Supply for Logic This is a voltage supply pin. It can be supplied externally or regulated internally. In 3V IO mode, this is a power input pin. In 5V IO mode, the output is around 3.3V. A capacitor should be connected between VDD and VSS under all circumstances		
8	VDDIO	Р	Power Supply for Interface Logic Level It should match with the MCU interface voltage level and must be connected to external source		
9	BS0		Communicating Protocol Select These pins are MCU interface selection input. See the following table:		
10	BS1	I	BS0 BS1 BS2 Serial Interface 0 0 0 Invalid 1 0 0 I2C 0 1 0		

Product No	DD-2C20BE-1A	REV. A

11	D52		8 bit 80XX-parallel	0	1	1
			4 bit 80XX-parallel	1	1	1
12	GPIO	I/O	It is a reserved pin and is recor	mmended to	o keep it floa	ating.
13	CS#	I	Chip Select This pin is the chip select input. The chip is enabled for MCU communication only when CS# is pulled low.		or MCU	
14	RES#	I	Power Reset for Controller and This pin is reset signal input. V of the chip is executed.		n is low, ini	tialization
15	D/C#	I	Data/Command Control This is Data/Command contro the input at D7~D0 is treated a When the pin is pulled low, th transferred to the command re relationship to MCU interface Timing Characteristics Diagra When the pin is pulled high an the data at SDIN is treated as o at SDIN will be transferred to mode, this pin acts as SA0 for	as display de input at D gister. For c signals, ple ms. ad serial intedata. When the comman	ata. 97~D0 will be detail ease refer to ease mode it is pulled I and register.	is selected, ow the data
16	R/W#	I	Read/Write Select or Write This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as Read/Write (R/W#) selection input. Pull this pin to "High" for read mode and pull it to "Low" for write mode. When 80XX interface mode is selected, this pin will be the Write (WR#) input. Data write operation is initiated when this pin and the CS# are pulled low.		node.	
17	E/RD#	I	Read/Write Enable or Read This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as the Enable (E) signal. Read/write operation is initiated when this pin is pulled high and the CS# is pulled low. When connecting to an 80XX-microprocessor, this pin receives the Read (RD#) signal. Data read operation is initiated when this pin is pulled low and CS# is pulled low.		the nen this pin	
18~25	D0~D7	I/O	Host Data Input/Output Bus These pins are 8-bit bi-directic microprocessor's data bus. Wh be the serial data input SDIN a input SCLK. When I2C mode together and serve as SDAout, the serial clock input SCL	nen serial m and D0 will is selected,	be the serial D2, D1 sho	ted, D1 will l clock uld be tied

Page	10 / 42
------	---------

26	IREF	I	Current Reference for Brightness Adjustment This pin is segment current reference pin. A resistor should be connected between this pin and VSS. Set the current at 12.5uA.		
27	ROM0		Character ROM Selection These pins are used to select Character ROM. See the following table: ROM ROM0 ROM1		
28	ROM1	I	ROM ROM1 ROM1 A		
29	OPR0		Select the number of Character Generator These pins are used to select Character number of character generator. See the following table: CGROM CGRAM OPRO OPR1		
30	OPR1	I	256		
31	VCOMH	О	Voltage Output High Level for COM Signal This pin is the input pin for the voltage output high level for COM signals. A capacitor should be connected between this pin and VSS.		
32	VCC	P	Power Supply for OEL Panel This is the most positive voltage supply pin of the chip. A stabilization capacitor should be connected between this pin and VSS when the converter is used. It must be supplied externally.		
33	N.C.	-	Reserved Pin (Supporting Pin) The supporting pin can reduce the influence from stress on the function pins. This pin must be connected to external ground

Product No.		

Page	19 / 42

Software configuration follows Section 5.4 Actual Application Example

5 FUNCTIONAL SPECIFICATION

5.1 COMMANDS

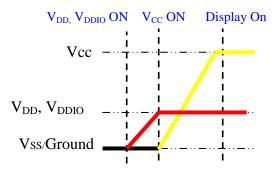

Please refer to the Technical Manual for the US2066

5.2 POWER UP/DOWN SEQUENCE

To protect panel and extend the panel lifetime, the driver IC power up/down routine should include a delay period between high voltage and low voltage power sources during turn on/off. It gives the panel enough time to complete the action of charge and discharge before/after the operation.

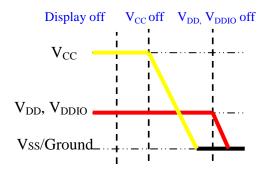

5.2.1 POWER UP SEQUENCE

- 1. Power up V_{DD} and V_{DDIO}
- 2. Send Display off command
- 3. Initialization
- 4. Clear Screen
- 5. Power up Vcc
- 6. Delay 100ms
- (When Vcc is stable)
- 7. Send Display on command

5.2.2 POWER DOWN SEQUENCE

- 1. Send Display off command
- 2. Power down V_{CC}
- 3. Delay 100ms (When V_{cc} reaches 0 and panel is Completely discharged)
- 4. Power down V_{DD} and V_{DDIO}

Conditions:

- 1) Since an ESD protection circuit is connected between VDD, VDDIO and VCC inside the driver IC, VCC becomes lower than VDD& VDDIO whenever VDD& VDDIO is ON and VCC is OFF.
- 2) VCC should be kept float (disable) when it is OFF.
- 3) Power Pins (VDD, VDDIO, VCC) can never be pulled to ground under any circumstance.
- 4) VDD&VDDIO should not be power down before VCC power down.

Product No.	DD-2C20BE-1A	REV. A
Floduct No.		

Page	20 / 42
------	---------

5.3 RESET CIRCUIT

When RES# input is low, the chip is initialized with the following status:

- 1. Display is off
- 2. 5X8 Character Mode
- 3. Display start position is set at display RAM address 0
- 4. CGRAM address counter is set at 0
- 5. Cursor is OFF
- 6. Blink is OFF
- 7. Contrast control register is set at 7FH
- 8. OLED command set is disabled

6 PACKAGING AND LABELLING SPECIFICATION

Product No.	DD-2C20BE-1A	REV. A
Flouuct No.		

30 / 42

7 QUALITY ASSURANCE SPECIFICATION

7.1 CONFORMITY

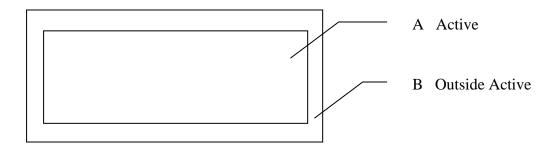

The performance, function and reliability of the shipped products conform to the Product Specification.

7.2 DELIVERY ASSURANCE

7.2.1 DELIVERY INSPECTION STANDARDS

IPC-AA610, class 2 electronic assemblies standard

7.2.2 Zone definition

7.2.3 Visual inspection

Test and measurement to be conducted under following conditions:

Temperature: $23\pm5^{\circ}\text{C}$

Humidity: $55\pm15\%$ RH

Fluorescent lamp: 30 W

Distance between the Panel & Eyes of the Inspector: ≥30cm

Distance between the Panel & the lamp:

≥50cm

Finger glove (or finger cover) must be worn by the inspector.

Inspection table or jig must be anti-electrostatic

Product No.	DD-2C20BE-1A	REV. A
Floduct No.		

Page	31 / 42
------	---------

7.2.4 Standard of appearance inspection

Partition	AQL	Definition
Major	0.65	Defects in Pattern Check (Display On)
Minor	1.0	Defects in Cosmetic Check (Display Off)

Check Item	Classification	Criteria
Panel General Chipping	Minor	X > 6 mm (Along with Edge) Y > 1 mm (Perpendicular to edge)

Product No.	DD-2C20BE-1A	REV. A
Product No.		

Page	32 / 42
------	---------

Check Item	Classification	Criteria
Panel Crack	Minor	Any crack is not allowable.
Cupper Exposed (Even Pin or Film)	Minor	Not Allowable by Naked Eye Inspection
Film or Trace Damage	Minor	
		Not Allowable
Terminal Lead Twist	Minor	D. TWISTED LEAD
Terminal Lead Broken	Minor	Not Allowable A. BRUKEN LEAD
Terminal Lead Prober Mark	Acceptable	

Product No.	DD-2C20BE-1A	REV. A	Dogo	33 / 42
Floduct No.			Page	33 / 42

Check Item	Classification	Criteria
Terminal Lead Bent	Minor	NG if any bent lead cause lead shorting.
(Not Twist or Broken)	Minor	NG for horizontally bent lead more than 50% of its width.
Glue or Contamination on Pin (Couldn't Be Removed by Alcohol)	Minor	
Ink Marking on Back Side of panel (Exclude on Film)	Acceptable	Ignore for Any

Product No.	DD-2C20BE-1A	REV. A
Floduct No.		

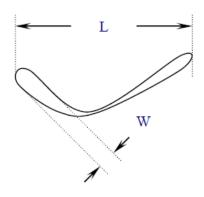

Page	34 / 42
------	---------

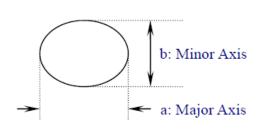

Check Item	Classification	Criteria
Any Dirt & Scratch on Polarizer's Protective Film	Acceptable	Ignore for not Affect the Polarizer
Scratches, Fiber, Line-Shape Defect (On Polarizer)	Minor	
Dirt, Black Spot, Foreign Material, (On Polarizer)	Minor	$\Phi \le 0.1$ Ignore $0.1 < \Phi \le 0.25$ $n \le 1$ $0.25 < \Phi$ $n = 0$
Dent, Bubbles, White spot (Any Transparent Spot on Polarizer)	Minor	Φ ≤ 0.5 → Ignore if no Influence on Display 0.5 < Φ
Fingerprint, Flow Mark (On Polarizer)	Minor	Not Allowable

- * Protective film should not be tear off when cosmetic check.
- ** Definition of W & L & Φ (Unit: mm):

$$\Phi = (a+b)/2$$

7.3 DEALING WITH CUSTOMER COMPLAINTS

7.3.1 Non-conforming analysis

Purchaser should supply Densitron with detailed data of non-conforming sample. After accepting it, Densitron should complete the analysis in two weeks from receiving the sample.

If the analysis cannot be completed on time, Densitron must inform the purchaser.

7.3.2 Handling of non-conforming displays

If any non-conforming displays are found during customer acceptance inspection which Densitron is clearly responsible for, return them to Densitron.

Both Densitron and customer should analyse the reason and discuss the handling of non-conforming displays when the reason is not clear.

Equally, both sides should discuss and come to agreement for issues pertaining to modification of Densitron quality assurance standard.

8 RELIABILITY SPECIFICATION

8.1 RELIABILITY TESTS

Test Item	Test Condition	Criteria
High Temperature Operation	85°C, 240 hours	The operational functions work
Low Temperature Operation	-40°C, 240 hours	The operational function works
High Temperature Storage	90°C, 240 hours	The operational function works
Low Temperature Storage	-40°C, 240 hours	The operational function works
High Temperature & High Humidity Storage	60°C, 90%RH, 240 hours	The operational function works
Thermal Shock	-40°C ⇔ 85°C, 100 cycles. 60 Mins dwell	The operational function works

- The samples used for above tests do not include polarizer.
- No moisture condensation is observed during tests.

8.1.1 FAILURE CHECK STANDARD

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure teat at 23 ± 5 °C; $55\pm15\%$ RH.

8.2 LIFE TIME

Item	Description				
1	Function, performance, appearance, etc. shall be free from remarkable deterioration more than 15000 hours under 80 cd/m² brightness and 50% Checkerboard, humidity (50% RH), and in area not exposed to direct sunlight. Software configuration follows Section 5.4 Initialization.				
	Parameter Min Max Conditions				
	Life Time (80 cd/m2)	15,000	-	Vcc=9V, Ta=25°C, 50%	
	Life Time (60 cd/m2)	25,000	-	Checkerboard.	
	End of lifetime is specified as 50% of initial brightness. The average operating				
2	lifetime at room temperature is estimated by the accelerated operation at high				
	temperature conditions.

9 HANDLING PRECAUTIONS

9.1 HANDLING PRECAUTIONS

- 1) Since the display panel is being made of glass, do not apply mechanical impacts such us dropping from a high position.
- 2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- 3) If pressure is applied to the display surface or its neighborhood of the OEL display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
- 4) The polarizer covering the surface of the OEL display module is soft and easily scratched. Please be careful when handling the OEL display module.
- 5) When the surface of the polarizer of the OEL display module has soil, clean the surface. It takes advantage of by using following adhesion tape.
 - * Scotch Mending Tape No. 810 or an equivalent

 Never try to breathe upon the soiled surface nor wipe the surface using cloth
 containing solvent such as ethyl alcohol, since the surface of the polarizer will become

Also, pay attention that the following liquid and solvent may spoil the polarizer:

* Water

cloudy.

- * Ketone
- * Aromatic Solvents
- 6) Hold OEL display module very carefully when placing OEL display module into the system housing. Do not apply excessive stress or pressure to OEL display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

- 7) Do not apply stress to the LSI chips and the surrounding molded sections.
- 8) Do not disassemble nor modify the OEL display module.
- 9) Do not apply input signals while the logic power is off.
- 10) Pay sufficient attention to the working environments when handing OEL display modules to prevent occurrence of element breakage accidents by static electricity.
 - * Be sure to make human body grounding when handling OEL display modules.
 - * Be sure to ground tools to use or assembly such as soldering irons.
 - * To suppress generation of static electricity, avoid carrying out assembly work under dry environments.

Product No.	DD-2C20BE-1A	REV. A	Dogo	39 / 42
			Page	39 / 42

- * Protective film is being applied to the surface of the display panel of the OEL display module. Be careful since static electricity may be generated when exfoliating the protective film.
- 11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OEL display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5).
- 12) If electric current is applied when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.

9.2 STORAGE PRECAUTIONS

- 1) When storing OEL display modules, put them in static electricity preventive bags avoiding exposure to direct sun light nor to lights of fluorescent lamps, etc. and, also, avoiding high temperature and high humidity environments or low temperature (less than 0°C) environments. (We recommend you to store these modules in the packaged state when they were shipped from Densitron Technologies Plc.) At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them
- 2) If electric current is applied when water drops are adhering to the surface of the OEL display module, when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

9.3 DESIGNING PRECAUTIONS

- 1) The absolute maximum ratings are the ratings which cannot be exceeded for OEL display module, and if these values are exceeded, panel damage may be happen.
- 2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specifications and, at the same time, to make the signal line cable as short as possible.
- 3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD). (Recommend value: 0.5A)
- 4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.
- 5) As for EMI, take necessary measures on the equipment side basically.
- 6) When fastening the OEL display module, fasten the external plastic housing section.
- 7) If power supply to the OEL display module is forcibly shut down by such errors as taking out the main battery while the OEL display panel is in operation, we cannot guarantee the quality of this OEL display module.
- 8) The electric potential to be connected to the rear face of the IC chip should be as follows: US2066
 - * Connection (contact) to any other potential than the above may lead to rupture of the IC.

Product No.	DD-2C20BE-1A	REV. A	Dogo	40 / 42
			Page	40 / 42

9.4 OTHER PRECAUTIONS

- 1) When an OEL display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur. Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored. Also, there will be no problem in the reliability of the module.
- 2) To protect OEL display modules from performance drops by static electricity rapture, etc., do not touch the following sections whenever possible while handling the OEL display modules.
 - * Pins and electrodes
 - * Pattern layouts such as the FPC
- 3) With this OEL display module, the OEL driver is being exposed. Generally speaking, semiconductor elements change their characteristics when light is radiated according to the principle of the solar battery. Consequently, if this OEL driver is exposed to light, malfunctioning may occur.
 - * Design the product and installation method so that the OEL driver may be shielded from light in actual usage.
 - * Design the product and installation method so that the OEL driver may be shielded from light during the inspection processes.
- 4) Although this OEL display module stores the operation state data by the commands and the indication data, when excessive external noise, etc. enters into the module, the internal status may be changed. It therefore is necessary to take appropriate measures to suppress noise generation or to protect from influences of noise on the system design.
- 5) We recommend you to construct its software to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.

10 SUPPORTED ACCESSORIES

10.1 DUO KIT

Densitron has developed an easy to use yet powerful development and demonstration tool for driving its range of Passive Matrix OLED displays from the USB port of a PC.

DUO (Densitron USB OLED) kit is hot pluggable and does not require extra cables or power supply to run, allowing users to be up and running in minutes.

The kit consists of an OLED display with transition Board, USB controller card, mini USB cable and a CD with software application and drivers.

Part number: PDK-N-2C20BE-1A

10.1 TRANSITION BOARD CARD

A Transition board card is like a daughterboard which is meant to be a circuit board for connections between the baseboards (DUO).

It has connector pins for interfacing between the display and the baseboards.

It also includes the OLED display.

Part number: PDT- N-2C20BE-1A

10.2 CONNECTOR BOARD CARD

A Connector board card is also a daughterboard which is a circuit board for connection between a microprocessor or microcontroller (customer's system).

Part number: EVK-CONNECT-029

10.3 CONNECTOR

Type: hot bar soldering process

No. of connections: 33

Pitch: 0.70mm

10.4 APPLICATION NOTES AND EXAMPLE CODES
