VARIMETER PRO

Function Diagram

## Circuit Diagram

- According to IEC/EN 60255-1, IEC/EN 60255-26, DIN VDE 0435-303
- Monitoring of
- Under- and overvoltage
- Asymmetry
- Phase failure
- Phase sequence
- Release time adjustable between $0.1 \ldots 5 \mathrm{~s}$
- One LED in each case for
- Auxiliary voltage A1/A2
- Overvoltage U
- Undervoltage $\mathrm{U}_{\text {min }}$
- Asymmetry / Phase sequence / Power failure
- Contact position
- Closed circuit operation
- 2 changeover contacts
- As option available with open circuit operation
- Width 45 mm

## Approvals and Marking

*) see variants

## Applications

For mounting three-phase networks for undervoltage, overvoltage, phase sequence, asymmetry, power failure.

## Indication

1. LED A1 / A2:
2. LED $U_{\max }$
3. LED $U_{\min }$ :
4. LED $\Delta$ :
5. LED:
on, when operating voltage present
on, in event of overvoltage
on, in event of undervoltage
on, in event of:

- asymmetry
- incorrect phase sequence
- power failure
on, when output relay activated

## Notes

Measurement procedures: arithmetical mean value measurement over several half-waves of rectified phase voltages L1/L2 and L2/L3. Reference phase is L3. Networks with or without neutral can be monitored. The auxiliary voltage to be applied to A1/A2 can also be taken from the three-phase network which is to be monitored. This reduces to 0.8-1.1 $U_{H}$ the permitted range of voltage of the network to be monitored

## $-40 \ldots+70^{\circ} \mathrm{C}$

## Remark

At an ambient temperature of $+70^{\circ} \mathrm{C}$ the device has to be mounted with 2 cm space to the neighbour units and the necessary air circulation must be provided.
The contact current must not be more then 2 A.
The life of the product may be reduced by the higher ambient temperature!
