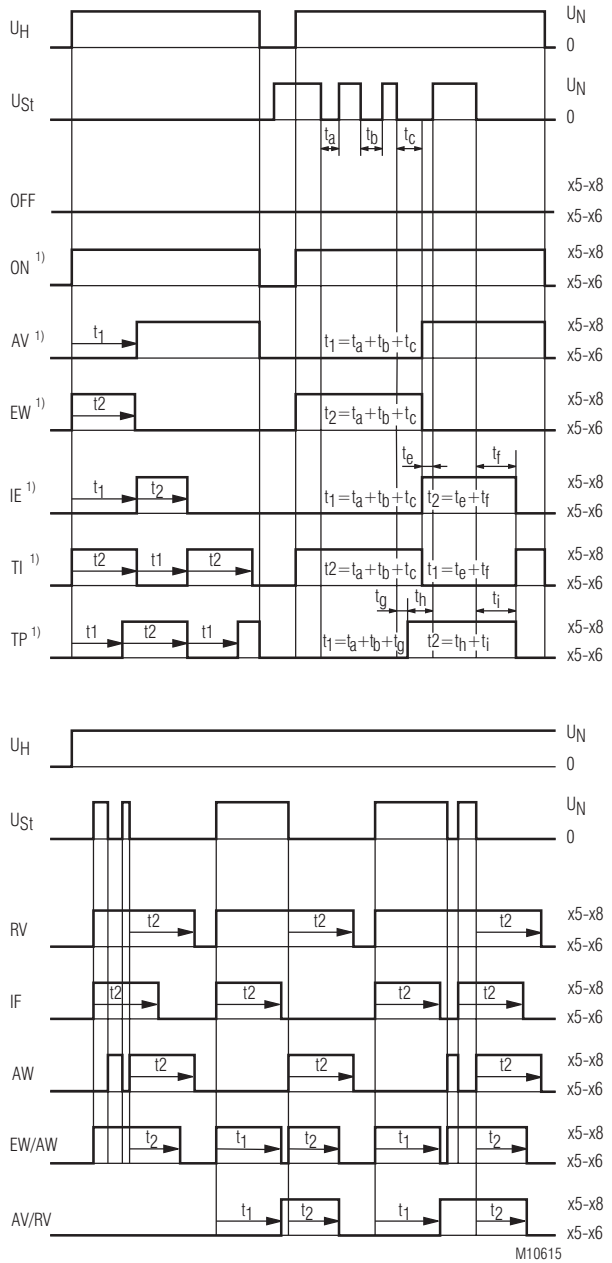
Function Diagram



U_H = Operating voltage A1-A2 or A3-A2
U_{ST} = Control voltage Bx-A2 x = 1, 2

1) These functions can also be started by the control input B1 if configured accordingly.
The interruption of time then is not available.

Your advantages
- Always the correct timer on stock
- Space saving in industrial cabinets because 2 multifunction relays in one compact enclosure
- Precise time delay by digital setting

Features
- According to IEC/EN 61 812-1
- Digital adjustable multifunction timer
- Functions can be adjusted separately for each output relay
  - Off (OFF)
  - Instantaneous contact (ON)
  - On-delay (AV)
  - Fleeting on make (EW)
  - Delayed pulse with adjustable pulse length (IE)
  - Cyclic timer, start with impulse (TI)
  - Cyclic timer, start with break (TP)
  - Off-delay (RV)
  - Pulse forming function (IF)
  - Fleeting on break (AW)
  - Fleeting on make and break (EW / AW)
  - On and off delay (AV / RV)
  - Relay 1 = Relay 2, both switch simultaneously
- Dual voltage model AC 230 V + AC/DC 24 V
- 2 changeover contacts
- 2 times separately adjustable from 0.02s to 9999h
- LED-indicator
- As option with pluggable terminal blocks for easy exchange of devices
  - with screw terminals
  - or with cage clamp terminals
- Width: 22.5 mm

Application

The MK 7830N is the ideal timer for timing control functions in industry. The simple and userfriendly configuration allows an optimised adaption to the application. The multifunction timer is also suitable for service and maintenance as it can replace timers with different functions and time ranges.

Indicators

The LED indicates the device status

OFF:	No operation voltage (A1/A2 bzw. A3/A2).
green:	The device is in operating mode
orange flashing:	The device is in set up mode
red:	Failure

For the chosen output relay the setting parameters are cyclically displayed

Display mode 1:	For the chosen output relay the setting parameters are cyclically displayed.
Display mode 2:	For the chosen output relay the time delay is displayed. The remaining time until the contact switches is indicated. This mode is only available when at least one time value t1 or t2 of the timing function is set to > 1 sec.

By pressing the button „ ⬆ “ the display can be toggled between relay 1 and relay 2. 2 display modes are available, the change between the modes is made by pressing the button „ ⬇ “.

Error Indication

In case of a failure the status LED is red and the text in the display shows the failure description

„Err.1“: Parameter checksum failure for output relay 1. The failure can be resolved by new configuration of output relay 1.

„Err.2“: Parameter checksum failure for output relay 2. The failure can be resolved by new configuration of output relay 2.

Notes

Factory setting
The output relays Rel.1 and Rel.2 are set to function OFF. The contacts 15-16 and 25-26 are closed. The function setup is described in section “Programming”.

Control inputs B1 and B2
The control inputs are assigned to the corresponding output relays. The input B1(+) acts on Rel.1, the input B2(+) on Rel.2. The functions RV, IF, AW,EW/AW and AV/RV have always to be controlled with one of the control inputs with reference to A2. For the functions ON, AV, EW, IE, TI and TP the control can be selected between B1, B2 and operating voltage during setup. To control B1(+) and B2(+) the voltage of A1, A3, or any other voltage in the range of AC/DC24-240 can be used.
When with selected function IF the control inputs B1 or B2 are connected to the unit simultaneously with A1 or A3 an output pulse of the length t2 is generated.

Interruption of time delay / time addition with B1 or B2
If for the functions AV, EW, IE, TI and TP the control is assigned to the operating voltage the time delay can be stopped by activating the corresponding control input. It continues the time delay by de-activating the control input (time addition).

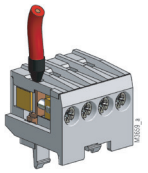
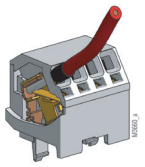
Options with Pluggable Terminal Blocks



Screw terminal
(PS/plugin screw)

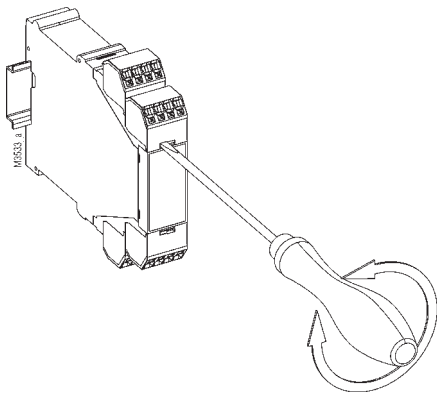


Cage clamp
(PC/plugin cage clamp)

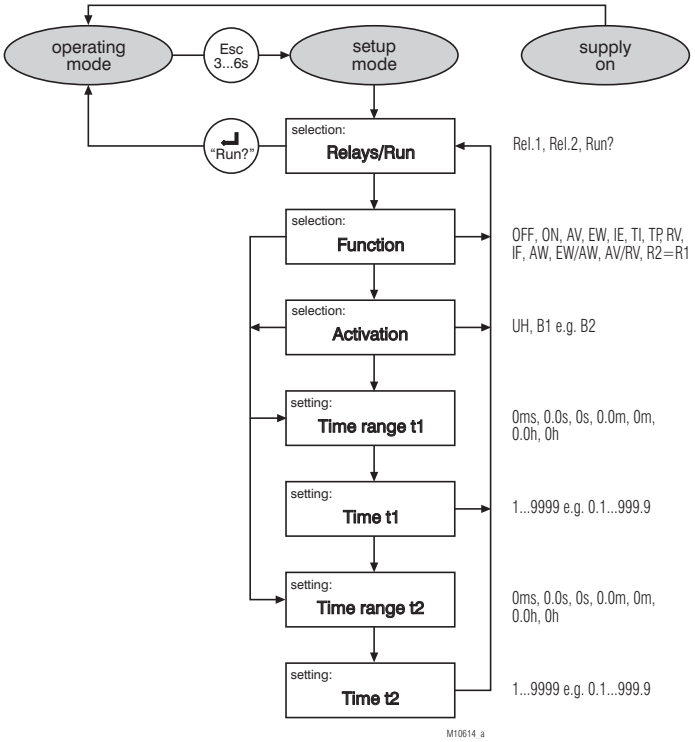
Notes

Removing the terminal blocks with cage clamp terminals

1. The unit has to be disconnected.
2. Insert a screwdriver in the side recess of the front plate.
3. Turn the screwdriver to the right and left.
4. Please note that the terminal blocks have to be mounted on the belonging plug in terminations.



Programming



If the button „ (Esc) “ is pressed and released after 3 to 6 sec while the power is applied, the unit changes into setup mode. The status LED indicates this flashing yellow. When changing to setup mode the time delay is interrupted and the output relays de-energize to position 15-16 and 25-26.
. In setup mode the first step “Relais/Run” selects the output relay Rel.1 or Rel.2 to be configured. Using the buttons „ (↑) “ and „ (↓) “ scrolls through the possible selections in this level. The button „ (↵) “ confirms the selection and moves to the next level. After completing the programming cycle the level “Relais/Run” is again displayed while the parameters are finally stored in the unit.
The new settings are activated when changing to operating mode either by selecting Run? In level “Relais/Run” or by switching the unit off and on.
